

Bureau Veritas Marine Fuel Services

New Comprehensive
Fuel Testing Program

VeriFuel

VeriFuel is the new Bureau Veritas Fuel Testing Program designed for today's marine industry which will set the future standard in marine fuel testing. Developed by a team of industry experts on both the user and vendor side of the submitted sample market, the program has been designed to meet the challenges faced by vessel operators in today's complex and busy environment.

VeriFuel will simplify preparation and shipment of samples, provide expert operational guidance and assessments with comprehensive fuel reports. VeriFuel further provides the latest web portal solutions for easy access to fuel reports, statistics and pertinent industry developments.

VeriFuel

Understanding Marine Fuel

Key Features & Benefits:

- Global coverage with over 115 accredited Bureau Veritas oil laboratories (ISO 17025) and dedicated VeriFuel laboratories in key geographical locations.
- Dedicated team of experts with years of experience in the commercial, technical and laboratory sectors of the marine fuel industry as well as representation within ISO and CIMAC.
- ISO 8217 parameters as well as additional tests in order to provide better insight on potential contaminants, stability and cold flow properties.
- Dual reporting format with separate specification and operational reports.
- Compare with both ISO 8217:2005 and 2010/2012 specification.
- Operational reports include previous results for a thorough fuel assessment and technical advice.
- Customized operational comments based on engine and separator models.
- Cubitainers are included in all sample kits.
- All sample kits contain a simple, illustrated instruction placard inclusive of Bunker Delivery Note compliance check-list.
- Paperless environment (e.g. Proforma invoice, courier papers, submission forms) to prepare samples for dispatch from the vessel.
- Use of dynamic PDF sample submission form for improved crew productivity simplifying data entry and creation of sample bottle labels.
- Controlling sample transportation to expedite shipping as well as ensuring no additional charges from the agents (e.g. agents using own accounts).
- Web portal allows a user to generate customized fleet reports.
- Immediate posting of global fuel issues via the web portal.
